ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA (ABB57737-ABB72072).

                                                                                                                                                                                                     capable of detecting 1000 or more genes from Drosophila. The inventuaseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA discloses genomic DNA sequences (ABL16176-ABL30511).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Drosophila melanogaster polypeptide SEQ ID NO 15276
                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB

H75634
myosin-Ic - mouse (fragment)
N;Alternate names: myosin-I beta
C:Species: Mus musculus (house mouse)
C;Date: 02-Jun-2000 #sequence_revision 02-Jun-2000 #text_change 08-9
C;Accession: H75634
R:Corzet, F: Amraoui, A.E.; Blanchard, S.; Lenoir, M.; Ripoll, C.;
Genomics 40, 332-341, 1997
A;Title: Cloning of the genes encoding two murine and human cochlean
A;Reference number: A59253; MUID:97237053; PMID:9119401
A;Status: preliminary; not compared with conceptual translation
A:Molecule tune. mpwn
